

Lung Cancer Screening

USPSTF 2021 Updated Recommendations

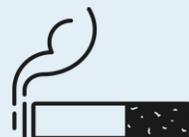

Updates

- Expanded age range and smoking history

What?

- Annual low-dose chest computed tomography (CT)
- Shared decision-making about screening
- Tobacco cessation treatments for those currently smoking
- Structured CT reporting (eg, Lung-RADS)
- Nodule follow-up algorithms

Who?

- Adults 50 to 80 years of age
 - At least 20 pack-year smoking history
 - Currently smoking
- OR**
- Quit smoking within the past 15 years
 - Asymptomatic and well enough to undergo curative intent surgery

Stop

- Once patient has not smoked for 15 years
- OR**
- Develops a health problem that significantly limits life expectancy or ability to undergo curative intent surgery
